Terminology and Scope of Study	xiv
Abstract	xviii
<i>Intisari</i>	xix
CHAPTER I. INTRODUCTION	
1.1 Research Background	1
1.2 Long Term Research on Genetic Conservation and Improvement of Sandalwood in Indonesia	6
1.3 Problems Identification	7
1.4 Research Formulation and Scientific Questions	11
1.5 Research Hypothesis	12
1.6 Research Objectives	13
1.7 Research Frame-works (Outlines)	14
1.8 Novelty of the Research	17
CHAPTER II. REFERENCES AND HYPOTHESIS	
2.1 <i>Santalum album</i> Linn. (Santalaceae)	
2.1.1 Taxonomy	19
2.1.2 Natural distribution and ecology	19
2.1.3 Ethnobotanical uses	21
2.2 The risk of extinction in sandalwood	24
2.3 The government efforts on the rehabilitation of sandalwood	27
2.4 Sandalwood populations and its landscape characteristics in Gunung Sewu	29
2.5 Genetic diversity, genetic structures and its conservation efforts	31
2.6 Factors affecting the genetic structures and dynamics in population: genetic processes, genetic forces and population structures	
2.6.1 The genetic processes and genetic forces	
<i>Mating system</i>	33
<i>Migration</i>	34
<i>Selection</i>	36
2.6.2 Population structures	36
2.7 The application of genetic markers in studying <i>Santalum</i>	38
CHAPTER III. MATERIALS AND METHODS	
3.1 Characteristics of Study Sites	43
3.2 Study Species	47
3.3 Research Methods	
3.3.1 Collecting the environmental parameters data	50
3.3.2 Measurement on population structures, clonality and recruitments	51
3.3.3 Isozyme analysis	53

3.3.4	Flowering and fruiting phenology observation	56
3.3.5	Pollinators and pollination observation	57
3.3.6	Hand pollination experiments	58
3.3.7	The reproductive parameters measurement	59
<b>CHAPTER IV. POPULATION STRUCTURES</b>		
4.1	Introduction	60
4.2	Materials and Methods	
4.2.1	Collecting the environmental parameters data	61
4.2.2	Measurement on the population structures, extent of clonality and offspring recruitments	61
4.2.3	Statistical analysis	62
4.3	Results	
4.3.1	The landscape and habitat characteristics of sandalwood populations	62
4.3.2	Climatic and environmental condition	66
4.3.3	Population structures	
	<i>Population width and clonality</i>	71
	<i>The effective population size (<math>N_e</math>)</i>	72
	<i>The extent of clonality</i>	75
4.3.4	The correlation among population structure variables	78
4.4	Discussion	
4.4.1	Variation on climatic and soil condition among geographical regions	79
4.4.2	Population width, density and size	83
4.4.3	The extent of clonality and the offspring recruitments	85
4.5	Conclusions	88
<b>CHAPTER V. SPATIAL AND TEMPORAL GENETIC DIVERSITY</b>		
5.1	Introduction	89
5.2	Materials and Methods	
5.2.1	Isozyme analysis	90
5.2.2	Statistical analysis	91
5.3	Results	
5.3.1	Genetic diversity parameters	
	<i>The allelic richness, allele frequency and distribution</i>	93
	<i>Heterozygosity and fixation index</i>	94
5.3.2	The effects of population structures on the genetic diversity	98
5.4	Discussion	
5.4.1	The allelic richness, allele frequency and distribution	102
5.4.2	Spatial genetic diversity: variation due to the population structures	103
5.4.3	Temporal genetic diversity: the pattern of inheritance	110
5.4.4	Variation on genetic diversity due to the differences on population evolutionary and disturbance histories	115
5.5	Conclusions	118
<b>CHAPTER VI. GENE FLOW AND SELECTION EVIDENCES OF SANDALWOOD UNDER VARIOUS POPULATION STRUCTURES IN GUNUNG SEWU, AND ITS EFFECTS ON GENETIC DIFFERENTIATION</b>		
6.1	Introduction	119
6.2	Materials and Methods	
6.2.1	Isozyme analysis	122
6.2.2	Measuring genetic differentiation, genetic distance and migration rate	123

6.3	Results	
6.3.1	Genetic differentiation and migration rate	
	<i>Genetic differentiation among populations</i>	127
	<i>Gene flow among populations</i>	125
	<i>The evidence of selection</i>	126
6.3.2	Genetic distance	129
6.4	Discussion	
6.4.1	Gene flow among populations	133
6.4.2	Evidence of selection	136
6.4.3	Genetic differentiation of sandalwood	
	<i>The relation between geographical and genetic distance</i>	137
	<i>The effects of population structures to the genetic differentiation</i>	139
	<i>The equilibrium between genetic drift and gene flow</i>	141
6.5	Conclusions	143
<b>CHAPTER VII. REPRODUCTIVE BIOLOGY IN SANDALWOOD (1): FLOWERING AND FRUITING PHENOLOGY</b>		
7.1	Introduction	144
7.2	Materials and Methods	
	7.2.1 Flowering phenology observation	147
	7.2.2 Measuring Pollination Effectiveness and Reproductive Success	147
7.3	Results	
	7.3.1 Flowering phenology	148
	7.3.2 Fruiting phenology and seed production	154
7.4	Discussion	
	7.4.1 The effects of environmental differences on flowering phenology	
	<i>Temperature and rainfall</i>	157
	<i>Soil moisture and soil types</i>	160
	<i>Altitude</i>	161
	7.4.2 The effects of environmental differences on reproductive outputs	162
7.5	Conclusions	165
<b>CHAPTER VIII. REPRODUCTIVE BIOLOGY IN SANDALWOOD (2): POLLINATION EVENTS</b>		
8.1	Introduction	166
8.2	Materials and Methods	
	8.2.1 Pollinators and pollination observation	168
	8.2.2 The reproductive parameters measurement	168
	8.2.3 Statistical analysis	169
8.3	Results	
	8.3.1 Flowers abundance, pollinators and pollination activities	
	<i>Flowers abundance and pollinators visitation rate</i>	170
	<i>Visitors diversity</i>	171
	<i>The frequency and efficiency of visitors</i>	178
	8.3.2 The reproductive outputs under open pollination	182
	8.3.3 The effects of floral and pollination traits on the reproductive outputs	183
8.4	Discussion	
	8.4.1 Pollinators and pollination activities	
	<i>Flowers abundance and pollinators visitation rate</i>	184
	<i>Visitors diversity</i>	186
	<i>The frequency and efficiency of visitors</i>	189
	8.4.2 The effects of floral and pollination traits to the reproductive outputs	195
8.5	Conclusions	200

CHAPTER IX. MATING SYSTEMS IN SANDALWOOD: THE OUTCROSSING  
RATE, SELFING RATE AND INBREEDING DEPRESSION

9.1	Introduction	201
9.2	Materials and Methods	
	9.2.1 Hand pollination experiments	202
	9.2.2 The isozyme-based mating system assesments	203
	9.2.3 Statistical analysis	204
9.3	Results	
	9.3.1 The frequency of selfing ( $s$ ), parental inbreeding coefficient ( $F_{IS}$ ), outcrossing rate ( $t$ ) and inbreeding depression	205
	9.3.2 The reproductive outputs	
	<i>Pollination Effectiveness and Reproductive Success</i>	209
	<i>Seed viability and seedling survival</i>	210
	9.3.3 The effects of population structures, flowering and pollination to the mating systems	212
	9.3.4 The effects of the mating systems to the reproductive parameters	213
	9.3.5 The effects of the mating systems to the offspring heterozygosity	214
9.4	Discussion	
	9.4.1 The effects of population structures and genetic diversity to the mating systems	216
	9.4.2 The effects of flowering and pollination to the mating systems	222
	9.4.3 The occurrence of inbreeding depression and confirmation to the “reproductive assurance theory”	225
	9.4.4 The effects of mating systems to the offspring heterozygosity and reproductive outputs	229
9.5	Conclusions	234

CHAPTER X. THE EFFECTS OF POPULATION STRUCTURES, FLOWERING  
TRAITS, GENETIC DIVERSITY AND MATING SYSTEMS ON REPRODUCTIVE  
TRAITS

10.1	Introduction	236
10.2	Materials and Methods	
	10.2.1 Flowering traits and the reproductive parameters measurement	238
	10.2.2 Statistical analysis	239
10.3	Results	
	10.3.1 Population structures and floral traits among populations and between seasons	
	<i>The effects of population structures to the floral traits</i>	244
	<i>The effects of floral traits to the parental heterozygosity and inbreeding rate</i>	244
	10.3.2 The correlation of population structures, floral and genetic parameters	244
	10.3.3 Seedling recruitments, seed sets, seed viability and seedling survival	245
	10.3.4 The effects of population structures, floral traits and parental heterozygosity to the reproductive outputs	249
10.4	Discussion	
	10.4.1 The effects of population structures to the floral traits	250
	10.4.2 The effects of floral traits to the genetic diversity and mating systems	252
	10.4.3 The effects of population structures, floral traits and parental heterozygosity to the reproductive outputs	254
10.5	Conclusions	257

**CHAPTER XI. GENERAL DISCUSSION: FINAL CONCLUSIONS,  
RECOMMENDATIONS AND IMPLICATION FOR DESIGNING THE  
CONSERVATION STRATEGY**

11.1	Recapitulation of the Results	259
11.2	Final Conclusions	263
11.3	Research Novelties	
11.3.1	New findings of the research	265
11.3.2	Recommendation and implication for designing the conservation strategy	
11.3.2.1	Mapping of genetic diversity and the genetic differentiation according to IUCN standard	269
11.3.2.2	Improving parental genetic base	270
11.3.2.3	Preventing the parental clonality	272
11.3.2.4	Enlarge the population size	273
11.3.2.5	Facilitate natural generative-seedling recruitments	273
11.3.2.6	Optimizing outcrossing in population by flowering, pollinators and pollination management, and outcross-planting design	274
11.3.2.7	Landscape connectivity to facilitate gene flow and prevent habitat fragmentation	277
11.3.2.8	Managing selection process in population; (9) establishing sandalwood conservation areas	279
11.3.2.9	Establishing sandalwood conservation areas	280
11.3.2.10	Establishing new plantations of sandalwood	282
11.3.2.11	Conduct further genetical and taxonomic studies on the possible occurrence of new variants	283
	<b>REFERENCES</b>	287
	<b>SUMMARY</b>	298
	<b>RINGKASAN</b>	308
	<b>ATTACHMENTS</b>	
1.	The landscape and habitat characteristics of sandalwood populations	318
2.	The allele frequency of eleven sandalwood populations in Java, Timor and Sumba islands, Indonesia	321
3.	The graphics of linear regression model, as complements for the linear regression tables presented in each of chapter	323
4.	The distribution map of sandalwood in each of population	346
