REPORT HEADER PAGE.....	i
APPROVAL SHEET	ii
DECLARATION	iii
DEDICATION	iv
PREFACE	v
TABLE OF CONTENTS.....	vi
LIST OF TABLES	viii
LIST OF FIGURES	ix
ABSTRACT.....	xi
INTISARI.....	xii
CHAPTER 1 INTRODUCTION.....	1
1.1 Background	1
1.2 Objectives.....	3
1.3 Limitations	3
1.4 Benefits	4
1.5 Authenticity.....	4
CHAPTER 2 LITERATURE REVIEW.....	5
2.1 Cross-Laminated Timber	5
2.1.1 Introduction	5
2.1.2 CLT mechanical properties	6
2.2 Modeling of CLT	6
2.2.1 Out-of-plane elastic modulus	7
2.2.2 In-plane elastic modulus	7
2.3 Lateral-Force Resisting System Design.....	8
2.3.1 Design code and parameter	8
2.3.2 Vertical bracing.....	10
2.4 Design Procedures of CLT Members.....	12
2.4.1 Bending members (out-of-plane)	13
2.4.2 Compression members	15
2.4.3 Tension members	16
2.4.4 Bending and axially loaded members	16
2.4.5 Bearing of members	17
2.5 Connections.....	18
CHAPTER 3 METHOD OF RESEARCH.....	21

3.1	Research Stages.....	21
3.2	Existing Building	23
3.3	Structure Design Modification.....	25
3.4	Preliminary Design	26
3.4.1	CLT panels dimension and properties.....	27
3.4.2	Glulam braced frame dimension and properties	28
3.5	Applied Load.....	29
3.5.1	Dead load	30
3.5.2	Live load.....	30
3.5.3	Roof live load.....	30
3.5.4	Rain load	31
3.5.5	Wind load.....	31
3.5.6	Seismic load	33
3.5.7	Connections.....	36
3.6	Numerical Analysis Using SAP2000.....	39
CHAPTER 4 RESULT AND DISCUSSION.....		47
4.1	Model Verification.....	47
4.1.1	Modal mass participation	47
4.1.2	Scaling of response spectra forces	48
4.2	Member Design and Evaluation.....	49
4.2.1	Floor and roof plates	49
4.2.2	Wall panels.....	50
4.3	Connection Evaluation.....	51
4.4	Structure Evaluation.....	52
4.4.1	Natural period of structure	52
4.4.2	Story drift	55
CHAPTER 5 CONCLUSION AND RECCOMENDATION		57
5.1	Conclusion	57
5.2	Recommendation	57
BIBLIOGRAPHY		59
APPENDICES		61
