LIST OF FIGURES	vii
LIST OF TABLES	ix
Abstract	x
<i>Intisari</i>	xi
I INTRODUCTION	1
1.1 Motivation	1
1.2 Problem Statement	2
1.3 Thesis Organization	2
II SYSTEM DYNAMIC AND MODELING	4
2.1 Dynamic of Quadcopter	4
2.1.1 Quadcopter Physical Movement	4
2.1.2 Rough Modeling	5
2.1.3 Translational and Rotational Effect	7
2.1.4 Modeling the Quadcopter	10
2.1.5 Non-linear Model	16
2.2 Real Quadcopter Model in The Laboratory	17
2.2.1 Specification	17
2.2.2 The Firmware	22
III REVIEW ON SLIDING MODE CONTROL	24

3.1	Introduction to Sliding Mode Control	24
3.2	Ideal Sliding Mode	25
3.3	Chattering Elimination	30
3.4	Equivalent Control	32
3.5	Conventional Sliding Mode	34
IV ATTITUDE CONTROL		40
4.1	Controller Design	40
4.2	Numerical Experiment	44
4.2.1	Result	47
V CONCLUSIONS AND FUTURE WORKS		55
5.1	Conclusions	55
5.2	Future Works	56
REFERENCES		57

LIST OF FIGURES

Figure 2.1	Quadcopter Movement	6
Figure 2.2	Horizontal movement of Quadcopter	7
Figure 2.3	Quadcopter axis [1]	7
Figure 2.4	Quadcopter on the frame reference term	9
Figure 2.5	Rotation movement in the xyz-axis	14
Figure 2.6	Crazyflie 10 DOF Quadcopter version 1.0	18
Figure 2.7	Motor Driver on Crazyflie Quadcopter [https://wiki.bitcraze.io]	21
Figure 3.1	State is drove to zero for $f(x_1, x_2, t) \equiv 0$	26
Figure 3.2	Convergence of the state	26
Figure 3.3	State are bounded in some distance from origin (0,0)	27
Figure 3.4	State bounded under disturbance $f(x_1, x_2, t) = \sin(2t)$	27
Figure 3.5	Disturbed system response with $f(x_1, x_2, t) = \sin(2t)$ using SMC	31
Figure 3.6	System trajectory	31
Figure 3.7	Discontinuous Control Signal	32
Figure 3.8	State variable response using quasi-sliding mode control	33
Figure 3.9	Zoomed picture of state convergence using quasi-sliding mode	33
Figure 3.10	Smooth control input using QSMC	35
Figure 3.11	Equivalent control via LPF (blue) in comparison with quasi- sliding mode (red)	35
Figure 3.12	Position tracking using ideal sliding mode	37
Figure 3.13	Sliding surface s	37
Figure 3.14	Sliding surface of Super Twisting Sliding Mode	39
Figure 3.15	Position tracking using Super Twisting Sliding Mode	39

Figure 4.1	Attitude on-board estimation in Crazyflie	46
Figure 4.2	Gyro sensor reading with communications frequency at 100 Hz	46
Figure 4.3	Sliding Mode performance for tracking angle	49
Figure 4.4	Proportional Derivative performance for tracking angle	49
Figure 4.5	Sliding Mode performance under different sigmoid parameter value	50
Figure 4.6	Proportional Derivative motor response	50
Figure 4.7	Small gain sigmoid constant motor response	51
Figure 4.8	High gain sigmoid constant motor response	51
Figure 4.9	Zoomed view of sliding mode control under presence of dis- turbance in angular velocity	52
Figure 4.10	Multi input effect for $\rho = 100$	53
Figure 4.11	Multi input effect for $\rho = 700$	53
Figure 4.12	Different Constants ρ effects on reaching time	54

LIST OF TABLES

Table 2.1	List of notations	5
Table 4.1	Measured physical parameter of Crazyflie	45
Table 4.2	Result of Controller's parameter	48
