

Intisari

Kualitas dari sliver sangatlah penting ketika dibuat menjadi benang, oleh karena itu merawat mesin carding dengan benar sangat penting pula. Untuk menghindari kecelakaan seperti kerusakan mesin, melakukan perawatan diperlukan untuk mencegahnya. Standar operasional prosedur atau SOP yang dibuat sistematis diperlukan agar proses perawatan nantinya berjalan lebih mudah.

SOP ini ditulis dengan beberapa cara diantaranya membaca buku manual, melihat mekanik berpengalaman melakukan perawatan, mengajukan pertanyaan yang diperlukan untuk menyelesaikan SOP ini.

Dengan pembuatan SOP ini, diharapkan siswa magang maupun mekanik baru tidak akan membuat kesalahan saat melakukan proses perawatan

ABSTRACT

The quality of sliver is really important due to when it is made to yarn. So taking care of carding machine in right way is important too. To avoid an accident such as damaged machine, Then doing a maintenance is needed to prevent it. A standard operational procedure which is made systematically is needed too because it will help maintenance process easier.

This SOP was written by doing several method such as reading a manual book, seeing experienced trainer doing maintenance, asking a question which was needed to completion this SOP and etc

By making this SOP, hopefully a new trainee or new employee will not make mistake during maintenance process.
