

The study examine the relationship between quality of personality “manusia tanpa ciri” based on “kawruh jiwa” Suryomentaram’s concept with vocational maturity in SMK students. It is hypothesized that there is a positive relationship between quality of personality “manusia tanpa ciri” based on “kawruh jiwa” with vocational maturity in SMK students. The research data are collected by using two scales: quality of personality scale and vocational maturity scale. Scales are administered to 80 SMK students between 15-18 years old. The collected data are processed by using Product Moment’s Pearson correlation analysis. The results show that there is a significant and positive correlation between quality of personality “manusia tanpa ciri” based on “kawruh jiwa” Suryomentaram’s concept with Vocational Maturity ($R=0,638$ dengan $p=0,00$ ($p<0,05$)). This results indicate that research hypothesis can be accepted. The determination coefficient is 0,407 indicating that effective contribution quality of personality to vocational maturity is 40,7 %.
