### **INTISARI**

Badan Ketahanan Pangan (BKP) Kementerian Pertanian melaksanakan program Pekarangan Pangan Lestari (P2L) dengan pemberian bantuan dana untuk kegiatan kebun bibit, demplot, pertanaman di rumah tangga, dan panen di tahun 2020 yang bertujuan untuk peningkatan ketersediaan, aksesibilitas, dan pemanfaatan pangan. Penelitian ini bertujuan untuk (1) mendeskripsikan tingkat partisipasi, dan (2) menganalisis pengaruh sikap, motivasi, dan pemanfaatan media internet terhadap partisipasi anggota KWT dalam kegiatan P2L dalam mendukung ketahanan pangan rumah tangga.

Penelitian ini dilaksanakan dengan menggunakan 6 KWT sampel penerima manfaat kegiatan P2L tahun 2020 di Kabupaten Gunungkidul yang diambil secara *stratified cluster sampling*. Pengambilan data primer dilakukan dengan wawancara secara langsung menggunakan kuesioner kepada 138 responden anggota KWT yang diambil secara *random sampling* dari 6 KWT sampel. Data dianalisis dengan uji proporsi dan *Partial Least Square (PLS)* menggunakan aplikasi *SMART PLS versi 3.0*. Berdasarkan uji proporsi diketahui bahwa anggota KWT memiliki partisipasi sedang dalam kegiatan P2L, baik dari aspek keterlibatan, kesukarelaan, maupun kesadaran dalam berpartisipasi. Hasil analisis *PLS* menunjukkan bahwa: 1) faktor sikap, pemanfaatan media internet, dan pendapatan berpengaruh langsung terhadap partisipasi anggota KWT dalam kegiatan P2L, 2) partisipasi berpengaruh langsung terhadap ketahanan pangan rumah tangga, 3) faktor pemanfaatan media internet dan pendapatan berpengaruh secara tidak langsung terhadap ketahanan pangan rumah tangga melalui partisipasi anggota KWT dalam kegiatan P2L di Kabupaten Gunungkidul.

### **ABSTRACT**

Badan Ketahanan Pangan (BKP) from The Ministry of Agriculture implements the Sustainable Food Garden or Pekarangan Pangan Lestari (P2L) program by providing financial assistance for nursery activities, demonstration plots, household planting, and harvesting in 2020 which aims to increase the availability, accessibility, and utilization of food. The research on the participation of KWT members in P2L activities aims to (1) describe the level of participation, and (2) analyze the influence of attitudes, motivations, and use of internet media on the participation of KWT members in P2L activities to support household food security.

This research was carried out with 6 KWT samples of beneficiaries of P2L activities in 2020 in Gunungkidul Regency which were taken by *stratified cluster sampling*. Primary data collection was done by direct interviews using a questionnaire to 138 respondents from KWT members taken by *random sampling* from 6 KWT samples. The collected data were analyzed on the proportion test and *Partial Least Square (PLS)* using *SMART PLS version 3.0* application. Based on the proportion test, it is found that KWT members have moderate participation in P2L activities, both from the aspect of the involvement, volunteerism, as well as awareness in participating. The results of the analysis *PLS* shows that: 1) attitude factors, internet media use, and income have a direct effect on the participation of KWT members in P2L activities, 2) participation has a direct effect on household food security, 3) internet media utilization factors and income indirectly affect household food security through the participation of KWT members in P2L activities in Gunungkidul Regency.
